

# Attic FIXER

Keep Microsoft 365 security automatically up to date

## Cybercriminals exploit poorly configured Microsoft 365 security

Microsoft 365 comes with excellent security features that are more than sufficient for most companies. But just like a lock on your door, you need to turn the key. Without the right settings, even the best security remains unused.

We ensure that all built-in protections work optimally and keep hackers out. At the same time, we maintain the right balance between security and usability.

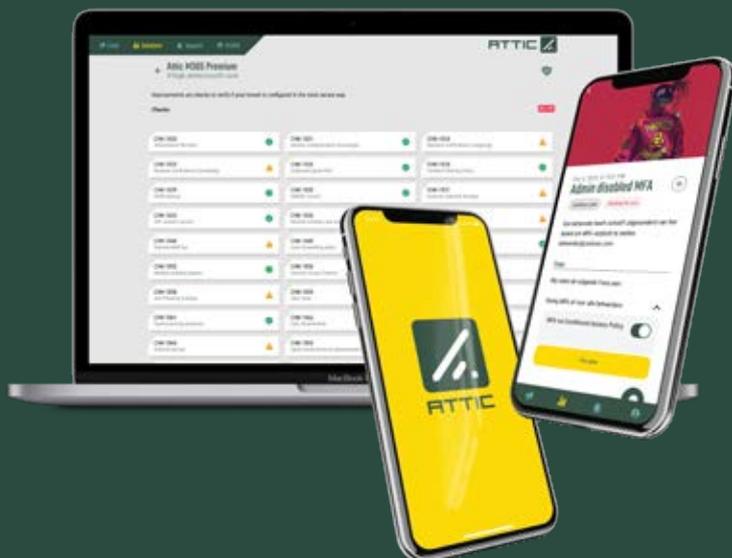

## If your settings are not correct, your security is weak.

Once inside, hackers can quickly cause financial and reputational damage.

-  Create hidden admin accounts for permanent access
-  Copy all company data to their own cloud
-  Use your Microsoft 365 environment for other cyberattacks
-  Hide suspicious activity by deleting log files

With the right settings, you can keep hackers out of your Microsoft 365 environment.

## Attic FIXER keeps your digital workplace secure and fixes problems

Attic FIXER performs more than 100 security checks on your Microsoft 365 environment. Every day. And even multiple times per day. This ensures hackers cannot exploit (new) misconfigurations.

If we discover a weakness, you will receive a notification in plain language with a concrete solution. With one click, you can authorize us to fix the problem.

## What protection is included in Attic FIXER?

### Protection against phishing

- ✔ Real-time detection of fake Microsoft 365 login pages
- ✔ Warning with red alert screen on fake pages
- ✔ Authenticity seal on genuine Microsoft 365 login pages
