

# Attic FREE

Microsoft 365 protection against fake login pages created by hackers

## 88% of cyberattacks start with a fake login page

Cybercriminals are getting smarter. They create fake login pages that look identical to the real Microsoft 365 login.

Sometimes the web address differs by only one letter, making it nearly impossible to recognize such an AiTM attack (phishing) yourself.

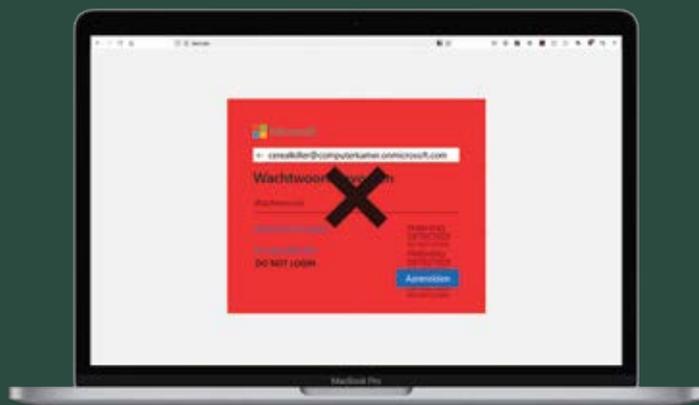

## Do you or a colleague log in on such a fake login page?

The damage this can cause is enormous:

- 🚨 Customers receive fake invoices "from you"
- 🚨 Your system is locked with ransomware
- 🚨 Your customer database is sold to the highest bidder
- 🚨 Your reputation is destroyed

Fortunately, this does not have to happen if your login security is in order.

## Attic FREE stops credential theft before hackers get a chance

Attic FREE detects phishing with fake login pages and immediately raises the alarm if you land on one.

You will then see a large red warning screen to alert you that a cybercriminal is trying to steal your login details. Stop typing and leave the page immediately. This way you keep hackers out.

## What protection is included in Attic FREE?

Protect yourself against the most common type of cyberattack where hackers bypass multi-factor authentication (MFA).

- ✔ Protection against phishing
- ✔ Real-time detection of fake Microsoft 365 login pages
- ✔ Warning with red alert screen on fake pages
- ✔ Authenticity seal on official Microsoft 365 login pages
- ✔ Email notification to the administrator when a colleague visits a fake page
- ✗ Insight into which colleague visited a fake login page
